EVOPOD CONSTRUCT

EVOPODs have four different basic sizes, but if there is a need for more depth, With our pods you can add and connect several identical pods to each other and create the space you need.

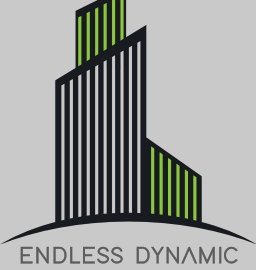

EVOPOD CONSTRUCT

EVOPOD units have optional castor wheels making it easy to move and reposition as needed.

This mobility ensures that you can the pod's location according to your changing requirements or room configurations.

EVOPOD CONSTRUCT

The EVOPODs light fixture is as an OSRAM LED module.

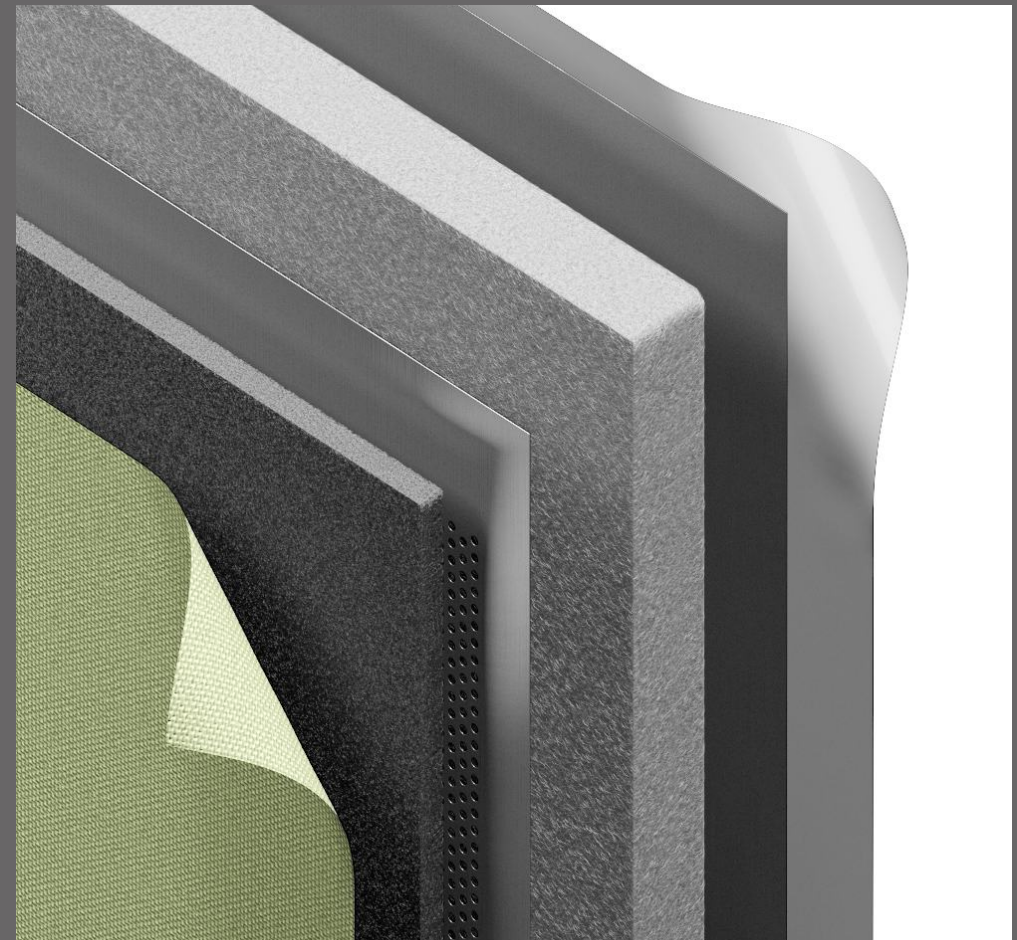

It reduces glare and delivers a CRI (coloring rendering index) of 92, Enduring visual accuracy in the pods spaces.

It is flicker-free and reduces eye fatigue, promoting focus and kind on the eyes.

EVOPOD CONSTRUCT

EVOPODs wall composition

The side wall consists of multiple layers of acoustic material, specifically designed to effectively block and absorb sound.

EVOPOD Air Ventilation

Balanced air pressure:

The fans are used for both air intaking and exhaust to keep the air pressure the same as it is outside the pod, preventing "Airplane ear".

Centrifugal fan:

The fan noise becomes apparent when it is quiet in the pod. We use centrifugal fans for air intaking to achieve smoother airflow at lower speeds creating less noise.

Automatic refresh:

Every 30 min the fan will start to ventilate the air automatically for 5 min keeping it always fresh and dry.

Acoustic air duct:

The pod's air duct contains sound-absorbing material to attenuate sound exchange between inside and outside.

EVOPOD CONSTRUCT

Reinforced transparency and sound insulation:

Laminate glass is used for better sound proofing while keeping transparency. The glass is made out of a 6mm double-layer glass (12mm total) which provides excellent sound insulation of at least 30db.

EVOPODs offer many furniture options to choose from (depend on the pod's size).

EVOPOD FURNITURE & MORE
